DETAILED ACTION

Election/Restrictions

This application contains claims 1-6, 17, 26, and 28 drawn to an invention nonelected with traverse in Paper filed on July 15, 2005. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 27 and 29 are rejected under 35 U.S.C. 102(e) as being anticipated by Lim et al. (Lim) (2004/0207784).

Lim discloses an exposed member comprising a continuous pattern (gate lines) and a discontinuous pattern (gate, source, drain, electrode) formed through exposure by projection exposure apparatus (abstract).

Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process.— MPEP 2113.

Allowable Subject Matter

Claims 7-16, and 18-25 are allowed.

None of the prior art of record teaches or discloses a projection exposure apparatus or a method of projection exposure apparatus comprising a projection exposure mask including a first mask pattern to form a continuous pattern and a second mask pattern to form discontinuous pattern, and one of the patterns being a reflecting type mask pattern and the other mask pattern being a transmitting type mask pattern in combination with the limitations of claims 7 or 18.

Response to Arguments

Applicant argues that the restriction is improper; however, the inventions I and II have separate classification from invention III, and would require separate searches.
